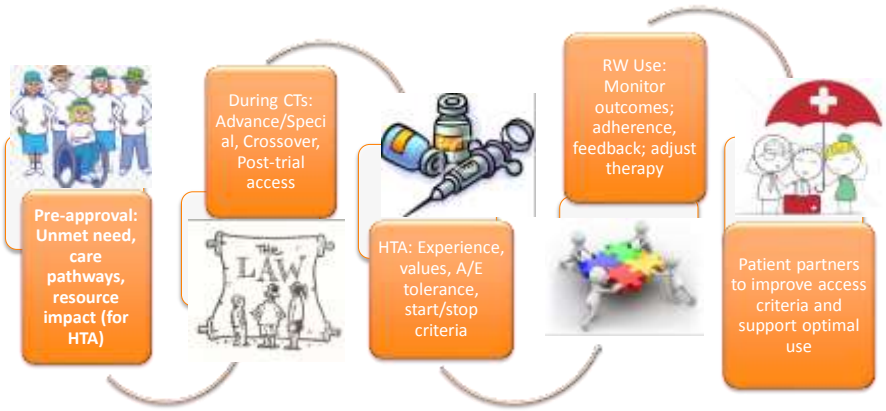
Patient Involvement in HTA: Country Differences

Patient Evidence From Published secondary, expert groups primary data	Patient Submission: By individuals, comments from experts, associations	Patient Submission: By patient groups, networks, consortiums	Patient Rep: Include Individuals, advocates, groups on committees; public forums	Patients/Public Attendance: HTA deliberation/ decision-making
Denmark (regionalized) Sweden SBU Italy AGENAS	UK NICE Brazil CONITEC Colombia IETS Taiwan NHIA	Australia PBAC Germany IQWiG Scotland SMC Canada CADTH	England NICE Germany G-BA Sweden SBU & TLV Australia PBAC & MSAC Canada CADTH	UK NICE Germany IQWiG Scotland SMC

Do Patient Goals Align with Other Stakeholders'?

Patient-Based Evidence Supports Sustainable Access



Training Patients for Participation

Key Learning re: Patient Engagement

- Globally, patient centricity has evolved increasingly to patient engagement in all spheres of healthcare decision making, including HTA
- Emerging best practices for engaging patients in HTA process (and beyond) serve as useful tools but they must be customized to fit country-specific HTA process and country culture
- Benefits of patient engagement in healthcare decision making including HTA are real but need to be better documented to encourage more patient engagement
- Patients (including patient groups and advocates) require training and support to take full advantage of opportunities for engagement and adding value
