

# Industry perspective on Generative AI in HEOR

**Vladimir Babiy**

*PhD, PharmD*

*Associate Director, HEOR*

Novartis

# Disclaimer

This presentation is provided in a personal capacity and is not intended to reflect or convey any official endorsement or stance by my employer.

# Plan

- Present & Future of AI in HEOR
- Feasibility of using AI for health economic modeling
- Implications
- Challenges or barriers faced by pharma in the adoption of AI

Sell me this pen.

It's AI powered.

**EVERY COMPANY  
RIGHT NOW**

# Where will the bottleneck be?

10% increase in success rates of trials

20% reduction in cost and duration of trials

Time to approval accelerated by 1-2 years

Is there enough bandwidth  
in HEOR?

# Present & Future of AI in HEOR

Evolution? Disruption? → Transformation.

## Experiments with Machine Learning (Analytic AI)

Key question:

Is it possible to analyze huge amounts of data?  
(with RWE in mind)

Tasks:

- Screening
- Data extraction

Learnings:

- It works.
- Data formats differ
- “Teaching” is resource consuming

## Experiments with Generative AI, Deployment of Analytic AI

Key question:

Is it possible to change how data turns into evidence?

Tasks:

- Evidence generation
- Modeling
- Translation between languages:
  - natural language ↔ programming language ↔ HEOR language

Learnings:

- It works but lacks consistency...

## Future is uncertain, but transformative

Key questions:

- How should processes be altered to better leverage the technology?
- Transformation of HEOR roles:
  - *Project Managers* → *AI Managers*?
- Will GenAI lead to the democratization of HEOR?
  - Generative AI can become a great equalizer to HEOR evidence generation and consumption

“Past”

Present

Future

# Feasibility of using Generative AI for health economic modeling

## Breakthroughs in Generative Multimodal AI

- No training, just tune your AI
- AI translates Natural language ↔ Programming language
  - Excel, R, Python
- AI understands information from multiple modalities: text, numbers, images, audio, and video
- AI is now being integrated into standard environments, incl. Excel, Word
- **NEW!** Model capable of searching web in real-time

# Efficiency is improved, but resource utilization is balanced

AI will rather be a cost-effective approach to generating evidence, than dominant

↑ Corpus  
of evidence

↑ Number  
of PICO's

↓ Tolerance  
to uncertainty

↑ Transparency  
and referencing

↑ Complexity of  
human validation

# Will anyone notice exponential growth of HEOR performance?

Probably **yes**, and definitely **not** by everyone.

**Industry** will just meet again the **increased expectations**

The GPT performance will continue to grow exponentially<sup>1</sup>

*“My dear, here we must run as fast as we can, just to stay in place.*

*And if you wish to go anywhere you must run twice as fast as that.”<sup>2</sup>*

# History lessons

How have vacuum cleaners changed our lives?

- Free up time?
- Vacuum cleaners have **changed our expectations** of what "clean" means
  - In early XX no one expected your carpet to be pristine all winter when it only got pulled up and beaten in the spring. Now, some people want to see the vacuum lines all the time.

# Challenges faced by pharma in adoption of AI

## People

- Insufficient AI literacy
- Lack of available talent and skills
  - Unlearning skills

## Processes

- Lack of a clear AI case for change
- Reimagining workflows and implementing processes on the go
- AI can become lazy (like human). How to manage?

## Grey zone at the Methodological acceptance landscape

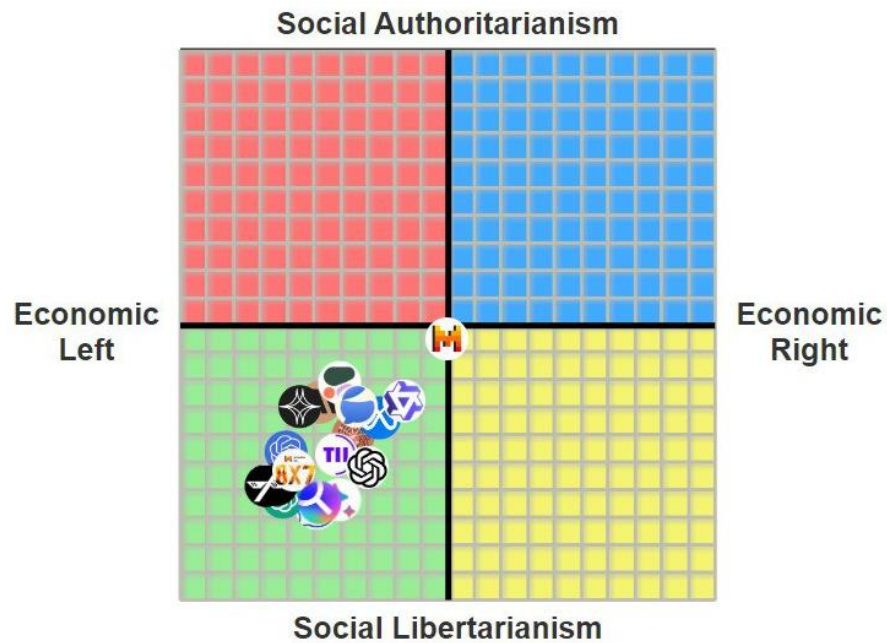

- Bias

Medicine = Substance + Information

AI in Industry HEOR =  
= Technology + Processes + User

# AI Chatbots are **biased** in the same way

Once AI is deployed in HEOR...

Will there be **trust in evidence generated without AI?**

Thank you  
for your attention
